

PHASE 03 · EXECUTIVE PROFILE

ENGINEERING LEADER · PLATFORM · AI · INDIA

Building engineering organizations for the **AI** era.

I'm Jashyawanta Huidrom — an engineering leader with 20+ years of experience building software, platforms and high-performing teams.

I connect people, technology and operating models to build engineering systems that scale.

01 · WHAT I DO

I build the **system**
around engineering.

Strong developers are only one part of a strong engineering organization.

I work across leadership, platforms, architecture, AI, quality and execution — connecting those pieces into an operating system that helps teams move faster and own outcomes.

01

02

03

04

Engineering Organizations

Teams, managers, ownership, culture and operating models that scale.

Platform Engineering

Shared capabilities that give product teams leverage and reduce friction.

AI Engineering

Turning AI experiments into practical engineering workflows and systems.

Execution at Scale

Connecting strategy, delivery, quality and release engineering.

02 · EXPERIENCE

From writing software to leading systems.

My career has moved from hands-on engineering into organizational and platform leadership — while keeping technology and execution at the center.

TODAY

Engineering Manager · ZS Associates / ZAIDYN

Leading platform engineering across identity, data and agentic AI. Contributing to engineering transformation and the rollout of an AI-native SDLC across ZAIDYN.

Identity

Quality & Release

FIS

Engineering Leadership · Worldpay / FIS

Managed up to 50 engineers across five scrum teams and multiple applications in a scaled agile delivery environment.

50+ Engineers

5 Scrum Teams

Scaled Agile

Delivery

20+ YEARS

Software Engineering Foundation

Built the career from software development through architecture, delivery, technical leadership and people management.

03 · AI-NATIVE ENGINEERING

AI should change how engineering

I see the bigger opportunity in redesigning the engineering system itself — developers, agents, platforms, quality and release processes working together with clear human ownership.

works.

Not just another feature. Not just a chatbot.

- 01 AI-assisted development as a default workflow
- 02 Agentic engineering with human accountability
- 03 Quality, security and governance inside the loop
- 04 Measure engineering outcomes, not activity

04 · BUILDING ENGINEERING IN INDIA

The next great engineering organization can be built from India.

For companies looking to establish or expand engineering in India, I bring hands-on technology

Build locally.
Think globally.

experience, people leadership and operating-model thinking.

I want teams to own outcomes — not simply execute tickets. That means developing leaders, creating strong technical foundations and building a culture that can continuously adapt.

01 · Leadership pipeline

02 · Technical foundations

03 · Engineering culture

04 · AI-native ways of working

05 · BUILDER

I still build.

Outside my day job, I turn ideas into working experiments — because engineering leadership is stronger when you still understand the act of building.

01

HUDI

AI engineering companion exploring memory, tutoring, mentoring and practical AI experiences.

AI · Personal Systems

02

SPORTIQ

Football analytics concept connecting player activity, wearable data and team insights.

Sports · Analytics · IoT

03

Bhult

Personal venture concept for building useful technology and meaningful impact from India.

Entrepreneurship · Technology

04

School Agent

Exploring AI-powered support for students, learning and school workflows.

AI · Education

06 · HOW I LEAD

Build people. Build systems. Then let the system **scale the people.**

01

People first

Grow leaders, create ownership and give teams room to become better.

02

Platform thinking

Build reusable capabilities once and let many teams benefit.

03

AI-native by design

Use AI where it changes engineering leverage, not simply where it looks impressive.

07 · WHAT'S NEXT

Building an engineering organization in India?

Let's talk about the people, technology and operating system needed to make it work.
